Water Network Study may cause lower water pressure

(Kahnawá:ke – 25, Kenténha/October 2006) The Mohawk Council of Kahnawá:ke's Capital Unit would like to notify the community that, starting Monday, 30 Kenténha/October, residents in certain areas of the village might experience a slight drop in water pressure and some discoloration. This is due to a 4 to 6 week study of the water network that requires the closure of some water valves.

If you do experience water discoloration during this period, just let your tap run until it clears up as it would most probably be harmless sediment stirred up by the process.

The Capital Unit wishes to thank you for your patience and understanding.
